

CARBON FIBER REEDS

TDR CARBON FIBER REEDS are the hottest reed valves on the market today. These carbon fiber reeds are made of the highest quality material available. This material is custom designed by **TDR** to give the best possible performance and have a long working life-span.

The object of any race-tuner is to increase the power of their machine. The real trick to this fine tuning is to get a maximum performance gain with the smoothest possible power band.

TDR CARBON FIBER REEDS are made of the latest in advanced composite materials. **TDR** has worked extensively with aerospace plastic engineers to develop a material that is far superior to the standard shelf variety of carbon fiber weaves. Combine this material with a high temperature epoxy resin, and breakdown and premature reed failure are virtually eliminated. These custom designed materials are manufactured specifically for **TONY DOUKAS RACING** to be used for two stroke reed applications. This woven fabric has been developed and tested to meet the unique high strain to failure requirements associated with today's high revving two stroke motors. **TDR** uses many various styles and designs of this fabric to meet the exact tension requirements of each motor.
